Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes human platelet-derived growth factor C (PDGF-C) (formally designated VBGF-F). PDGF-C polypeptides have the ability to stimulate and enhance proliferation or differentiation, and/or growth or motility of cells expressing a PDGF-C receptor.

CD proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimulating commediate processed to generate the active truncated form of PDGF-C and used to receptor-binding cpells comprising to an also be used to promote fibror of promoted form of PDGF-C and used to rinding the receptor-binding specificity of PDGF-C and be used to inhibit tumour growth of a tumour corporation. CC antagonists can be used to inhibit tumour growth of a tumour cexpressing PDGF-C in a mammal. Specific types of human tumours, e.g. choriocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroleukemia, can be identified by testing for expression of control production of remour cells into a normal population of remodelling during invasion of treat fibrotic conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360

This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has candothelial cell growth factor-E (VEGF-E) polypeptide which has tranquilizer, vulnery and cardiant activity. VEGF-E can be administered therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially humans. It is useful in wound repair and tissue generation and cardiovascular or endothelial disorders in mammals, especially to treat disorders as above. VEGF-E can be used to screen for antagonists and agonists, and the antagonists administered to treat angiogenic disorders in mammals (especially humans) e.g. cancer or seren for antagonists and agonists, and the antagonists and agonists, concerting the antibodies.

CC treat angiogenic disorders in mammals (especially to diagnose cardiovascular, endothelial or angiogenic disorders in mammals (e.g. useful to detect VEGF-E polypeptide, especially to diagnose cardiovascular disease, or neovascularization associated with tumor formation by contacting the antibody with a tissue sample and detecting the antibody with a tissue sample and detecting the antibody with a tissue sample and endothelial disorders in mammals, by detecting abnormally high or low VEGF-E gene expression in the samples. They can also be used to diagnose a disease or this succeptibility to a disease related to a mutated form of vector and samples. They may also be used to produce probes useful to detect related as a sample. They may also be used to produce probes useful to detect related as a sample. They may also be used to produce probes useful to detect related to a sample. They may also be used to produce probes useful to detect related to a sample of the probes useful to detect well as a sample of the probes useful to detect well as a sample of the probes useful to detect well as a sample of the probes useful to detect well as a sample of the probes useful to detect well as a second to the pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TGACATCTGCCCTGGCCGGCCAGAGACGAGGGACTCAGGCGGAATCCAACCTGAGTAGTA 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of human vascular endothelial cell growth factor-E (VEGF-E, also referred to as PRO:200), and the polynucleotide sequence encoding it. VEGF-E is related to VEGF and bone morphogenetic protein 1. VEGF-E is useful in wound repair, as well as in the generation and regeneration of tissue. The sequences of the invention are useful for diagnosing or treating cardiovascular, endothelial or anglogenic disorders such as cancer, diabetes mellitus, cardiac hypertrophy and atherosclerosis. The polynucleotide encoding VEGF-E is useful in the gene therapy of such disorders. The present sequence encodes human VEGF-E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 1979.4; DB 25; Length 2825;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            361
                                                                                                                                                                                               Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, postriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease e.g. myasthemia gravis, autoimmune diabetes and systemenic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-18, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           421

```
AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bisoactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting the polypeptide for specific targeting. The polypeptide targeting the polypeptide pairs provide specific targeting of bisoactive molecules to cells. AAC78600 to AAC78877 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                         Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -

The present sequence is that of cDNA clone DNA29101-1272 or UNQ174 (ATCC 20963) isolated from a human glioma cell line G61 cDNA library using probes (see AAA88523-26) based on an expressed sequence tag (see AAA88522) identified on the basis of homology to vascular endothelial growth factor (VEGF). The clone contains a single open reading frame encoding a 345-amino acid protein (see AAAB19578) and esignated PRO200 or VEGF-B. The isolated cDNA can be used in the recombinant production of PRO200 (VEGF-B). The invention relates to the use of PRO polypeptides, including PRO200, to delay, prevent or rescue retinal cells such as retinal neurons selected from cells, amacrine cells, displaced amacrine cells, displaced amacrine cells, horizontal and bipolar neurons, and supportive cells (including Mueller cells and bipolar neurons, and supportive cells (including Mueller cells including expected by retinal injury, light or environmental trauma or degeneration, including age-related, retinal detachment, retinal teams, retinal degeneration, including age-related, retinal detachment, retinal teams, retinal degenerative myopia, acute retinal neurosis syndrome, traumatic chorioretinapathies or contusion such as Puttscher's retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      549

Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus

## Claim 23; Fig 1; 309pp; English.

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, 3jogran's systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombooytopaenia, thyroidits, diabetes mellitus, immune-mediated renal disease, hepatobiliary diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory on peripheral nervous systems, hepatobiliary diseases, inflammatory of immune or immune-mediated skin diseases, allergic diseases, autoimmune or immune-mediated skin diseases, allergic diseases, including agarfic rejection and graft-versus-host-disease.

Immunological diseases of the lung, and transplantation associated diseases including araft rejection and graft-versus-host-disease.

AAC58377 to AAC58378 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAC58579 to AAC58422 and
